

Fish Grip

Ergonomic Fishing Rod Handle

Installation Instructions:

1. Install the bait cast reel and tighten the reel nut to secure the reel to the rod. The line must be removed from the rod eyelets.

2. Install the longest shim that will fit around the threaded portion of the fishing rod. Position the slit at the bottom. See Figure 1.

3. Position the main body over the shim with the flat side facing the reel. Push the main body down to snap it around the shim. See Figure 2.

Note: If the longest shim is not used, the main body will be installed partially over the reel nut.

4. Align the main body straight up so the slot is in line with the rod eyelets. See Figure 3.

5. Secure the main body to the rod using the supplied nut, screw and allen wrench. Use the shortest screw possible. See Figure 3.

WARNING: Do not over-tighten the screw or permanent damage to the fishing rod may occur.

6. Thread the handle onto the main body until tight. See Figure 4.

7. Thread the line through the window in the main body and then through the eyelets on the rod. See Figure 3.
